

Financial Ratios & Formulas

Ratio	Formula
Financial Statement Formulas	
Accounting Equation, aka Balance Sheet Equation	Assets = Liabilities + Shareholders' Equity
Income Statement: Retail	Net Revenues - Cost of Goods Sold = Gross Profit/Margin - Operating Expenses = Operating Income - Non-Operating Income, Expenses, Gains, & Losses = Net Income before tax - Tax = Net Income
Statement of Retained Earnings	Retained Earnings, beginning balance +/- Prior Period Adjustment +/- Change in Accounting Principle = Retained Earnings, adjusted balance + Net Income - Dividends declared = Retained Earnings, ending balance
Statement of Shareholders' Equity	Shareholders' Equity, beginning balance + additional equity issuance +/- change in Retained Earnings = Shareholder's Equity, ending balance
Statement of Cash Flows	Cash flows from Operating Activities +/- Cash flows from Investing Activities +/- Cash flows from Financing Activities = change in Cash balance
Market Performance Ratios	
Earnings per share	(Net Income - Pref Stk dividends) / Shares outstanding
Price to earnings ratio	Market share price / Earnings per share
Enterprise value	Market capitalization + Interest Bearing Debt - Cash
Enterprise value multiplier	Enterprise value / Earnings before interest + taxes
Market to Book Ratio	Market value per share / Book value per share
Market Capitalization	Market price per share X Shares outstanding
Return on Common Equity	Net income / Common equity
Return on investment	Net Income + Interest X (1 - tax rate) / (Equity + long-term debt)
Return on owner's equity	Net income / Average Owner's Equity
Return on Total Assets	Net Income + Interest X (1 - tax rate) / Total assets
Dupont formula	Net Income/Equity = (Net Income/Sales) X (Sales/Assets) X (Assets/Equity)
Dupont formula	States that ROE can be computed as: Profit margin X Total asset turnover X Equity Multiplier
Economic Value Added (EVA)	EBIT X (1 - t) - WACC X Capital Invested OR Equity X (ROE - Ke)

Profitability Ratios

Gross profit margin	$\text{Gross Profit} / \text{Net Sales or Revenues}$
Net Profit margin	$\text{Net Income after tax} / \text{Net Sales}$
Operating profit margin	$\text{Operating profit} / \text{Net Sales}$
EBIT return on Assets (EROA)	$\text{EBIT} / \text{Average Total Assets}$
Pre-tax Income to Sales	$\text{Pretax income} / \text{Net sales}$
Pre-tax return on assets	$\text{Pretax income} / \text{Total assets}$
Pre-tax return on common equity	$\text{Pre-tax} / \text{Common equity}$
Return on Assets	$\text{Net Income} / \text{Total Assets}$
Return on Equity	$\text{Net income} / \text{Average Total Equity}$ OR $(\text{Net Income}/\text{Sales}) (\text{Sales}/\text{Assets}) (\text{Assets}/\text{Equity})$

Asset Utilization / Turnover Ratios

Total asset turnover	$\text{Net Sales} / \text{Average Total Assets}$
Accounts Receivables turnover	$\text{Net Sales} / \text{Average Accounts Receivable}$
Average Collection Period	$365 \text{ days} / \text{Receivables turnover ratio}$
Inventory turnover	$\text{Cost of Goods Sold} / \text{Average Inventory}$
Days sales in payables	$\text{Average Accounts and Expenses Payable} / (\text{Operating expenses} / 365)$
Days sales in inventory	$365 \text{ days} / \text{Inventory turnover ratio}$
Debt-free Working Capital Turnover	$\text{Sales} / \text{Debt-free Working Capital}$
Capital intensity	$\text{Average Total assets} / \text{Net Sales}$
Working capital turnover	$\text{Sales} / (\text{Current assets} - \text{current liabilities})$

Short-term Solvency / Liquidity Ratios

Cash	$\text{Cash} / \text{Average Current Liabilities}$
Current cash debt coverage	$\text{Net Cash Provided by Operating Activities} / \text{Average Current Liabilities}$
Current ratio	$\text{Current Assets} / \text{Current Liabilities}$
Quick or Asset Test ratio	$\text{Quick Assets (Cash \& equivalents + S-T investments + Receivables)} / \text{Current Liabilities}$
Interest-bearing Debt to Equity	$\text{Interest-bearing debt} / \text{Total equity}$
Dividend payout	$\text{Dividends Per Share} / \text{Earnings per Share}$
Dividend payout ratio	$\text{Dividends Paid} / \text{Net Income}$
Net Cash Flow from Operating Activities (NCFOA)	$\text{Net Income} + \text{Depreciation and Amortization}$
Rule of 72	$\text{Time to Double Your Money} = 72 / \text{interest rate}$
Working capital	$\text{Total Current Assets} - \text{Total Current Liabilities}$

Debt Ratios

Total debt to total assets	$\text{Total Liabilities} / \text{Total assets}$
Total debt to total equity	$\text{Total Liabilities} / \text{Total Equity}$
Total equity to total assets	$\text{Total equity} / \text{Total assets}$

Equity Multiplier	Total Assets / Total Equity
Long-term debt to equity	Long-term Liabilities / Total Equity
Times interest earned aka Interest coverage ratio	Operating income* / Interest expense
Cash coverage	Operating income* + depreciation + amortization / Interest
Fixed charge coverage	(Net Income before taxes + Interest charges + long-term lease payments) / (Interest charges + Long-term lease payments)
Time value of money formulas	
Lower case letters (pv & fv) denote present and future values of \$1 (a lump sum)	present value of \$1 (lump sum) $pv = fv (factor) n, i$
	future value of \$1 (lump sum) $fv = pv (factor) n, i$
CAPITAL letters (PV & FV) denote Present & Future values of an Annuity (a series of payments)	Present Value of Annuity (ordinary) $PV = Payment (Factor) n, i$
	Future Value of Annuity (ordinary) $FV = Payment (Factor) n, i$
An Annuity Due has the word "Due" as a subscript to the word Annuity	Present Value of an Annuity _{Due} $PV_{Due} = Payment (Factor) n, i$
Note: if you don't have an Annuity _{Due} table, use an ordinary Annuity table & multiply the Factor by 1 + Interest rate	Future Value of an Annuity _{Due} $FV = Payment (Factor) n, i (1 + interest\ rate)$
Management Accounting Formulas	
Profit Equation	Selling Price (# units sold) – Variable Costs (# units sold) – Total Fixed Costs
Total Contribution Margin	Contribution Margin per Unit * Units Sold
Contribution Margin per unit	Selling Price per Unit - Variable Costs per Unit
Variable Cost per Unit	Total Variable Costs / Units Sold
Contribution Margin Ratio	(Selling Price – Variable Costs) / Selling Price
Break-Even Point (BEP) in Units	Fixed Costs / Contribution Margin
Break-Even Point in \$	Fixed Costs / Contribution Margin Ratio
Break Even	Total Revenues - (Total Variable Costs + Total Fixed Costs) = 0
Target Income	Selling Price (# units) – Variable Costs (# units) – Total Fixed Costs = Target income
Target Cost per Unit	((Quantity * Price) – fixed costs – profit required) / Quantity
Margin of Safety (MOS)	Actual Sales – BEP = (#units * sales price) - BEP
Martin of Safety Ratio	Actual Sales – BEP = (#units * sales price) - BEP OR Expected Sales – Break Even Sales OR Margin of Safety / Expected Sales
Overhead Rates Using One Cost Pool	Total Overhead / Total Labor Hours

Overhead Rates Using Two Cost Pools	$\text{Rate}_1 = \text{Type}_1 \text{ Overhead} / \text{Type}_1 \text{ Labor Hours}$ OR: $\text{Rate}_2 = \text{Type}_2 \text{ Overhead} / \text{Type}_2 \text{ Labor Hours}$
Allocating Joint Costs	Joint cost allocated to product A = [Sales value of A / (Sales value of A + Sales value of B)] x Joint Costs And: Joint cost allocated to product B = [Sales value of B / (Sales value of A + Sales value of B)] x Joint Costs
Full Price with Markup = Price + Markup	Full Price with Markup = Price + Markup Price = Variable Costs + (Fixed Costs/Unit) Market = (Markup Rate) (Price)
Profit maximizing price	Total contribution margin - Fixed Costs
Incremental Profit or Loss	Incremental Revenue – Incremental Cost
Incremental Cost per Unit	Sum of Variable Costs / units produced
Incremental Costs for Additional Units	(Incremental Cost per Unit) * Additional Units Produced
Total Budget = Total Costs	Total Variable Costs + Total Fixed Costs
Estimate of Variable Cost	Change in Cost / Change in Activity
Estimate of Variable Cost	(Cost at its highest level of Activity - Cost at its lowest level of Activity) / (Highest level of Activity - Lowest level of Activity)
Estimate of the total cost for a given activity level	Total cost = Fixed cost + (Variable cost per unit x Activity level in units)
Finance Formulas	
Rule of 72 = time to double your money	TDM = 72 / interest rate
Present Value of \$1 (lump sum)	$PV = FV^n / (1 + i)^n$
Future Value of \$1 (lump sum)	$FV_n = PV \times (1 + i)^n$
Future value with compounding more than an	$FV_n = PV * (1 + i/m)^{m * n}$
Future value with continuous compounding	$FV_{\infty} = PV * e^{i * n}$
Future value with general growth rate	$FV_n = PV * (1 + g)^n$
Holding period return	$HPR = [(1 + r_1) (1 + r_2) \dots (1 + r_n)] - 1$
Hamada equation	$\beta_L = \beta_U * [1 + (1 - T_c) * (D/S)]$
Net present value	$NPV = \sum_t^T \frac{C_t}{(1 + i)^t} - C_0$
Internal rate of return	$\sum_{t=0}^T \frac{CF_t}{(1 + IRR)^t} = 0$
Internal rate of return factor	Net Initial Investment / Annual Cash Flow
Modified Internal rate of return	$FV_{\text{profits}} = PV_{\text{costs}} (1 + MIRR)^N$

Discounted cash flow	$Cash\ Flow / (1 + r)^n$
Beta	$B_u = B_L / \{1 + [(1-t)(W_d/W_e)]\}$ $B_R = B_u\{1 + [(1-t)(W_d/W_e)]\}$
Build-up Method	$k_e = R_f + (R_{Pm}) + R_{Ps} + R_{pu}$
Capitalization rate	Discount rate - long-term growth rate
Capital Asset Pricing Model (CAPM)	$R_S = R_{rf} + (R_M - R_{rf}) * \beta_E$
Modified CAPM	$k_e = R_f + B(R_{Pm}) + R_{Ps} + R_{pu}$
Valuation formula	$K_d = \text{Marginal borrowing rate} (1 - \text{marginal tax rate})$
Weighted average cost of capital (WACC)	$W_S R_S + W_D R_D$
Weighted average cost of capital with TAX impact	$W_S R_S + W_D R_D (1 - T)$
Weighted average cost of capital with TAX impact and Preferred Stock	$W_S R_S + W_D R_D (1 - T) + W_{PS} R_{PS}$
Interest rate parity: US\$ to Euro	$F(\text{euro}/\$) = S(\text{euro}/\$) (1 + R_{rf}^{\text{euro}}) / (1 + R_{rf}^{\$})$
Cost of Preferred Stock	$R_{PS} = (D_{PS} / P_{PS})$
Cost of Equity with Flotation costs	$R_S = (D_1 / (P_0 * (1 - F))) + g$
Purchasing power parity	$P_{\text{dollar}} = S(\text{dollar}/\text{euro}) * P_{\text{euro}}$
Dividends Paid Out	$NI - (w_s * \text{Capital Budget})$
Dividend growth	$R_s = (D_1 / P_0) + g$
Bond yield plus risk premium	$R_s = Y_{LTD} + \text{Equity Risk Premium}$
Profit from ownership of a Call option	$\text{Profit}_{\text{call}}^{\text{long}} = -C_o + \text{Max}(S - X, 0)$
Profit from ownership of a Put option	$\text{Profit}_{\text{put}}^{\text{long}} = -P_o + \text{Max}(X - S, 0)$
Break even point for a Call option	$S = X + C_o$
Break even point for a Put option	$S = X - P_o$
Black Scholes Option Pricing model	$d_1 = \frac{\ln(S/K) + \left(r + \frac{S^2}{2}\right)t}{s(\sqrt{t})}$ $d_2 = d_1 - s(\sqrt{t})$

Finance Abbreviations Defined

B = Beta	A coefficient used to modify a rate of return variable.
B_L	Levered beta
B_U	Unlevered beta
B_R	Relevered beta
C	Call premium
e	Exponential item
EBIT	Earnings before interest and taxes
EBITDA	Earnings before interest, taxes, depreciation, and amortization

g	Long-term rate of growth
K	Option striking price
K_E	Discount rate of common equity capital
K_d	After-tax cost of debt
\ln	Natural log
N	Cumulative standard normal distribution
NCF	Net cash flow
r or R_F	Risk free interest rate (investments free of default risk)
RP_m	Equity risk premium for the market (return that is > risk free rate)
RP_S	Risk premium for small stock premium that is > RP_m (average size stock)
s	Standard deviation
S	Current stock price
t	Tax rate, or Time Until Option Exercise
W_e	Weight of common equity in capital structure
W_d	Weight of debt in capital structure
